RE: Dagger Point Shoreline Protection (CBBEP Project 1931)

## **Blackjack Shoreline Protection – Dagger Point Current Activities:**

The USACE individual permit application and the Environmental Assessment was submitted to the USACE on December 3, 2021. The application includes the proposed shoreline protection and bluff stabilization for the eroding shoreline of the Aransas National Wildlife Refuge on the eastern shoreline of the Blackjack Unit along San Antonio Bay, particularly near Dagger Point. The Environmental Assessment is being reviewed internally at USFWS. Anchor QEA will respond to permit questions as necessary. The State of Texas General Land Office Application for State Land Use – Coastal Lease was submitted in December 2021 as well. Anchor QEA submitted a scope of work which outlines the tasks that will be taking the project to final design. Once the project partners review the scope of work, a new work order will be executed.
